

Project Reference

Calmoon Rail, Rhine Valley (Germany)

Application	Track
Length of track:	40 km
Material used:	Calmoon Rail
Country:	Germany
Project location:	Rhine Valley
Owner:	Deutsche Bahn

Project description:

Back in 2013, Deutsche Bahn set a good example for environmentally friendly and comfortable rail transport by installing Calmoon Rail on a 40 km stretch of track in the picturesque Rhine Valley. This innovative noise reduction system not only promises less noise from rail traffic, but also a more pleasant travel experience for passengers.

The revolutionary technology consists of a rail web shield that has been installed along the entire length of the tracks. Its aim is to reduce vibrations and the associated noise, which not only improves the quality of life in the surrounding communities, but also the comfort of travelers.
