

Project Reference

Bridgesleeper & Walkway, Tokyo (Japan)

Area of application	Bridge/ FFU walking deck
Length of track:	approx. 10m
Material used:	FFU Sleepers and FFU walking deck
Country:	Japan
Project location:	Komagome Station, Yamanote-Line, Tokyo
Owner:	JR East

Project description:

Due to the wide range of adjustment options, FFU sleepers offer ideal solutions, as in this case with bridges. Especially due to the possibilities of the individual assembly of add-on parts, such as covers, guide rails, cable guides, etc. In addition, the FFU synthetic sleepers offer a durable solution due to the very long service life.
